

The Cube Pro Mosquito Misting System

The only mosquito misting system of its kind

Rid your yard of mosquitoes and nuisance insects once and for all. The 55 gallon, 26 inch Cube Pro Mosquito Misting System is powerful enough to handle up to 80 nozzles on up to 1200 feet of tubing, while misting at 300 psi. The innovative cube design houses all the components in one compact space, safely and securely under the lid. The user friendly, multi-function, digital interface is easy to use and offers data menus, several daily stir cycles, and allows for 24 independent daily mist cycles.

The Cube Pro comes with a **remote control** for misting in between scheduled mists, an **agitator** to ensure a consistent blend with every mist and an **anti-siphon valve** to stop the flow of misting concentrate if the tubing gets cut.

Pynamite systems offer a couple different power options: plug it in and forget about it... keeps working for up to 2 weeks if electricity is lost, or add the optional solar panel and charge the system with the power of the sun. When using the optional solar panel you never need to worry about having access to an A/C power source.

OPTION

- **SOLAR PANEL**
Run the system without electricity.

FEATURES

- Custom designed 55 gallon, 26 inch Cube all-inclusive system
- Professionally engineered digital controller can be programmed up to 24 independent mist cycles a day
- Programmable agitation and mist duration settings, from 5 – 180 seconds each mist cycle
- Wireless, long range remote control initiates or stops a misting cycle
- High pressure pump operates at 300 psi
- Agitator and daily stir cycles ensure a consistent misting solution in every misting cycle
- Anti-siphon valve stops solution from emptying if tubing accidentally gets cut
- Pressure maintaining valve holds pressure in the nozzle circuit
- Technology to add an optional solar panel
