200’ x 200’ fenced in back yard
Perimeter control

Approximately
400 feet of 3/8” tubing
600 feet of 1/4” tubing

Perimeter control is a great way to minimize mosquitoes in a yard. Attaching to the fence around the property at about 3-4 feet high minimizes drift. This height allows the spray to drift into the turf killing the breeding mosquitoes that nest there.

The 3/8” tubing serves as a supply line only. The 1/4” tubing is the nozzle feed line.
